DETAILED ACTION

Claims 1-10 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 1, the general formula is required to be MDHal, the M, D and Hal are defined, however, it is unclear if the formula would include compounds such as K_2AlF_5 or Na_3AlF_6 , $Na_5Al_3F_4$. Also, in claim 1, it is unclear if the required "a metal halide" can be any metal halide or it should be limited to just Al, Ga, In or Tl and whether or not the alkali metal salt in the column (3) must be the same as the alkali metal salt which is fed to the extruder. In claim 1, "a metal halide" and "an alkali metal salt" are required (each is in singular form), it is unclear how a "mixtures" of salt melt can be formed from these two starting materials.

Claims 5-10 provide for the different uses of a salt melt, but, since the claim does not set forth any steps involved in the method/process, it is unclear what method/process applicant is intending to encompass. A claim is indefinite where it merely recites a use without any active, positive steps delimiting how this use is actually practiced.

Claims 5-10 are rejected under 35 U.S.C. 101 because the claimed recitation of a use, without setting forth any steps involved in the process, results in an improper definition of a process, i.e., results in a claim which is not a proper process claim under 35 U.S.C. 101. See for example *Ex parte Dunki*, 153 USPQ 678 (Bd.App. 1967) and *Clinical Products, Ltd. v. Brenner*, 255 F. Supp. 131, 149 USPQ 475 (D.D.C. 1966).

Art Unit: 1754

Claims 1-10 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, second paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter: the prior art does not disclose or suggest a process for the preparation of a salt melt by feeding a metal halide, an alkali metal salt into a heatable extruder.
